

**IN THE SPECIFICATION:**

Please add the following after line 25, page 5:

--The clips 20 and 48 are non-lockable, so that the clips can be readily removed from the selected apertures. This permits rapid adjustment of the straps in field conditions. Further, the clips 20 and 48 can be attached to and removed from the support arms using only one hand. In detail, each of the clips 20 and 48 further comprise a first, U-shaped portion 112, engaging the selected aperture and a second, tensile spring bar 114 biased against the U-shaped portion, whereby the user opens the spring clip 20 or 48 by pressing the tensile spring bar away from the U-shaped portion. See Fig. 8.—
